## **DETAILED ACTION**

## Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 7, and 8, drawn to peptides and pharmaceutical compositions comprising the peptide, classified in class 530, subclass 300, for example.
- II. Claims 2-6, drawn to nucleic acids, vectors, host cells, and methods of recombinantly producing peptides, classified in class 435, subclass 69.1, for example.
- III. Claim 9, drawn to a therapeutic method, classified in class 514, subclass2, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related products. The related inventions are

distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, Groups I and II are directed to products that do not overlap in scope in that they are distinct both physically and functionally and are not required one for the other. Also, the products have different modes of operation in that the peptides have biological activity whereas the nucleic acids have no inherent biological activity other than that they can hybridize to other nucleic acids or be used as a template in transcription. Therefore, the products

Application/Control Number: 10/632,389 Page 3

Art Unit: 1646

are patentably distinct. Further, the peptide of Group I can be prepared by processes which are materially different from recombinant DNA expression of Group II, such as by chemical synthesis. Additionally, the DNA of Group II can be used other than to make the protein of Group I, such in gene therapy or as a probe in nucleic acid hybridization assays. Examination of both products in one patent application would result in an undue search burden, since each requires a separate search of the literature and sequence databases.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the peptide can be used to make antibodies or to identify binding partners (e.g., receptors) in a sample.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are not disclosed as capable of use together and have different modes of operation.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth C. Kemmerer, Ph.D. whose telephone number is (571) 272-0874. The examiner can normally be reached on Monday through Thursday, 7:00 a.m. to 5:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Nickol, Ph.D. can be reached on (571) 272-0835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
